- Insulin (a hormone regulating glucose metabolism)
- Oxytocin (a hormone involved in childbirth and social bonding)

- Glutathione (an antioxidant)

Key Characteristics of Peptides:

- Usually water-soluble
- Capable of crossing cell membranes depending on their size and structure
- Often act as messengers or regulators within the body

Defining Proteins

Proteins are large, complex molecules composed of one or more polypeptide chains folded into specific three-dimensional structures. They typically contain 50 or more amino acids, although the precise cutoff is fluid.
