Sample CCNA Discovery 1 Capstone Project Answers

Scenario 1: Basic Network Connection

Question: Configure the network so that PCs can communicate with each other and access the internet via the router. Use the following IP scheme:

- Router Interface connected to the switch: 192.168.1.1/24
- PC1: 192.168.1.2/24, Gateway: 192.168.1.1
- PC2: 192.168.1.3/24, Gateway: 192.168.1.1

Answer:

- Configure the router interface:Router> enable
Router configure terminal

Router(config) interface gigabitEthernet 0/0

Router(config-if) ip address 192.168.1.1 255.255.255.0

Router(config-if) no shutdown

Router(config-if) exit

- Configure PCs:PC1 & PC2: Set IP address to respective addresses and default gateway to 192.168.1.1

- Verify connectivity:PC1> ping 192.168.1.3 // To test between PCs

PCs> ping 192.168.1.1 // To test router connectivity

PCs> ping 8.8.8.8 // To test internet access (assuming NAT is configured)

Scenario 2: Basic Troubleshooting

Question: PCs cannot ping the router. What are possible causes and solutions?

Answer:

- Check physical connections: Ensure cables are properly connected and interfaces are enabled.
- Verify IP configuration: Confirm that PCs have correct IP addresses, subnet masks, and default gateways.
- Check interface status on the router:Router> enable

Router show ip interface brief

Ensure the relevant interface is up and has the correct IP address.

- Ping from router to PCs:Router> ping 192.168.1.2
