The 2013 guidelines simplified some procedures without compromising effectiveness, making it easier for lay rescuers and professionals alike to perform CPR confidently.

Step-by-Step CPR Procedure According to the 2013 Guidelines

Understanding the correct sequence and technique is critical for effective CPR. The 2013 AHA study guide provides a clear, step-by-step approach designed to maximize patient survival.

Assessing the Situation

- Ensure the scene is safe for both the rescuer and the victim.
- Check for responsiveness by gently tapping the victim and shouting.
- If unresponsive, call 911 immediately or direct someone else to do so.
- Check for breathing; if the victim is not breathing or is gasping, begin CPR.

Starting Chest Compressions

- Place the victim on a firm, flat surface.
- Kneel beside the victim's chest.
- Position your hands?heel of one hand on the center of the chest (lower half of the sternum), with the other hand on top, interlacing fingers.
- Keep your elbows straight and shoulders directly above your hands.
- Press down hard and fast?compress the chest at least 2 inches deep for adults, at a rate of 100-120 compressions per minute.
- Allow the chest to fully recoil between compressions.

Rescue Breaths

- Open the airway using the head-tilt, chin-lift maneuver.
- Pinch the victim?s nose shut.
- Give rescue breaths: breathe into the victim?s mouth until the chest rises visibly, about 1 second per breath.
- Deliver 2 rescue breaths after every 30 compressions.

Use of Automated External Defibrillators (AEDs)

Early defibrillation is a cornerstone of the 2013 guidelines, significantly increasing survival chances when performed promptly.

Steps to Use an AED

- Turn on the AED and follow its prompts.

- Expose the victim's chest and ensure the skin is dry.
- Attach AED pads to the victim's bare chest, following the diagram on the pads.
- Ensure no one is touching the victim while analyzing.
- Follow AED prompts?if a shock is advised, ensure everyone clear before delivering it.
- Resume CPR immediately after the shock or if no shock is advised, starting with chest compressions.

The 2013 guidelines emphasize that AED use should not be delayed?early defibrillation can dramatically improve survival rates.
