$$2x - 3x = -4 - 5$$

\]

\[

$$-x = -9$$

\]

\[

$$x = 9$$

\]

Answer: $(x = 9)$

Deep Dive into Major Topics

Number and Numeration

Understanding numbers forms the foundation for all mathematical concepts. The 2014 exam tested:

- Ability to find HCF and LCM efficiently using prime factorization.
- Simplify expressions involving exponents and scientific notation.
- Convert numbers between different forms (fractions, decimals, percentages).

Sample Question:

Find the HCF and LCM of 48 and 180.

Approach:

- Prime factorization:
- $48 = 2^4 \times 3$

- $180 = 2^2 \cdot 3^2 \cdot 5$
- $\text{HCF} = 2^2 \cdot 3 = 12$
- $\text{LCM} = 2^4 \cdot 3^2 \cdot 5 = 16 \cdot 9 \cdot 5 = 720$

Algebra

Algebra questions often involve solving equations, simplifying expressions, and applying identities. The 2014 paper emphasized:

- Manipulating algebraic fractions.
- Solving simultaneous equations using substitution or elimination.
- Recognizing and applying identities like $(a + b)^2$, $(a - b)^2$, and difference of squares.

Tip:

Practice solving various types of equations systematically, checking solutions by substitution.

Sample Question:

Solve for x : $3x + 2 = 11$.

Solution:

- Subtract 2 from both sides: $3x = 9$
- Divide both sides by 3: $x = 3$

Geometry

Geometry questions tested students' understanding of angles, shapes, and properties of figures. The exam often included:

- Calculating missing angles using the angle sum property.
- Properties of triangles (isosceles, equilateral, right-angled).
- Recognizing symmetry and transformations.

Sample Question:

In triangle ABC, if angle A = 50° , and angles B and C are supplementary, find the measures of angles B and C.

Solution:

- Sum of angles in a triangle: $A + B + C = 180^\circ$
- Given $A = 50^\circ$, so $B + C = 130^\circ$
- Since B and C are supplementary: $B + C = 180^\circ$, but the question states they are supplementary, which suggests the problem might involve external angles or other properties. Clarify the context before solving.

Note: Always carefully interpret the question and diagrams.

Mensuration

The 2014 exam included calculations involving:

- Surface area and volume of common solids.

- Cone: Surface Area = $\pi r(l + r)$, Volume = $(1/3)\pi r^2 h$
- Sphere: Surface Area = $4\pi r^2$, Volume = $(4/3)\pi r^3$

Sample Question:

Calculate the volume of a sphere with radius 7 cm.

Solution:

- Volume = $(4/3)\pi r^3$
- = $(4/3) \pi 7^3$
- = $(4/3) \pi 343$
- = $(4/3) 3.1416 343 \approx 4.1888 343 \approx 1438.7 \text{ cm}^3$

Statistics and Data Handling

Understanding how to organize and interpret data was a key component.
